At whom may concern

We made a test of the product **HIGH GRADE** in a 30" truck that has a generator and an air conditioning with independent engine, having temperatures around 70°C in the lower side of the truck. Inside the truck we had temperatures around 28°C that means that we had an incredible reduction in temperatures caused by **HIGH GRADE** product. That's why we make a high recomendation in the use of this product for the outstanding energy saving we obtained.

Sincerely

Guillermo Romo Lepiz

General Manager
